

DIY Puffy Paint

You will need:

- 1 tbsp self-raising flour
- Food colouring
- 1 tbsp salt
- Water
- Paper
- Paintbrush
- Microwave

Instructions

1. Mix the self-raising flour, salt and a few drops of food colouring together in a large bowl.
2. Slowly add some water to make a smooth paste.
3. Paint a picture using the paste. (For a fun alternative, you could use ice block sticks or squirt bottles.)
4. When you have finished your painting, place the design in the microwave and heat on a high setting for 10-30 seconds, or until the paint puffs and has dried out.
